

## WHAT IS CLAIMED IS

1. A wireless search device, comprising:

identification code storage means for storing an identification code;

5 identification code input means for inputting an identification code;

applicable notification voice storage means for storing notification voice data to be applied for notification;

10 communication means for automatic transmission and reception of an identification code and notification voice data;

15 identification code identifying means for identifying whether the identification code received with said communication means is in accordance with a code stored in said identification code storage means; and

20 notification means for notifying arrival of the other party by notification voice data stored in said applicable notification voice storage means in the case of completion of identification with said identification code identifying means, and characterized in that

25 the notification voice data are automatically transmitted after completion of mutual identification with said identification code identifying means at encounter with the other party in search, and arrival of said party notified by making the same notification voice at the both sides.

2. A wireless search device according to claim 1, further comprises:

notification voice storage means for storing a plurality of notification voice data; and

5 notification voice input/selection means for inputting notification voice data in said notification voice storage means, selection of one of a plurality of notification voice data stored in said notification voice storage means, and storing it in said applicable notification voice storage means.

10 3. A wireless search device according to claim 1, further comprises:

previous identification code storage means for storage of identification codes applied for the previous identification, and for forwarding of an identification code to be applied for the coming meeting to said identification code storage means, and

15 identification code selection means for selecting an identification code to be applied for the coming meeting from the identification codes stored in said previous identification code storage means.

20 4. A wireless search device according to claim 2, further comprises:

previous identification code storage means for storing an identification code applied for the previous identification, and for forwarding of an identification code to be applied

25

for the coming meeting to said identification code storage means, and

identification code selection means for selecting an identification code to be applied for the coming meeting from the identification codes stored in said previous identification code storage means.

5 5. A wireless search device according to claim 1, wherein,

when, after the previous identification for a person as the other party, said person is required to be searched again, the identification code applied for the previous identification may be reapplied.

10 6. A wireless search device according to claim 2, wherein,

15 when, after the previous identification for a person as the other party, said person is required to be searched again, the identification code applied for the previous identification may be reapplied.

20 7. A wireless search device according to claim 3, wherein,

when, after the previous identification for a person as the other party, said person is required to be searched again, the identification code applied for the previous identification may be reapplied.

25 8. A wireless search device according to claim 4,

wherein,

when, after the previous identification for a person as the other party, said person is required to be searched again, the identification code applied for the previous identification may be reapplied.

9. A wireless search device according to claim 1, wherein

said identification code storage means may store a plurality of identification codes.

10. A wireless search device according to claim 2, wherein

said identification code storage means may store a plurality of identification codes.

11. A wireless search device according to claim 3, wherein

said identification code storage means may store a plurality of identification codes.

12. A wireless search device according to claim 4, wherein

said identification code storage means may store a plurality of identification codes.
